submissions:

1 November 2021

Message from the Guest Editors

Parasitology is more and more neglected in the teaching of medical Schools, however parasites continue to represent a very important threat to human beings.

Data from the 2013 Global Burden of Disease studies have highlighted how parasitic infections continue to be among the leading causes for the highest disabilities worldwide.

Just to mention intestinal helminths they account for billions of infections worldwide with an important impact in terms of mortality and loss of disability adjusted life years on human health, particularly in the low income countries where they may worsen the malnutrition conditions, especially in childhood with important effects on psycho-physical growth.

The aims of the present special issue are to give some examples of how the parasites may affect public health in different geographical areas.

The special issue should consider three sections: i) vector-borne parasites; ii) water borne parasites; iii) foodborne parasites.

All aspects of these parasites can be considered, but particular emphasis is prioritized on the impact on public health, in terms of quality of life and socio-economic relevance.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
